

Application

Advantec Milk Sediment Disc filters are used to determine the amount of sediment or insoluble material present in raw milk and other dairy products. The amount of sediment found is then used to grade the quality of the milk.

Features

- Offers better results than lintine paper due to smaller retention
- Made of long, refined cellulose fibers
- White and black discs available. Black discs provide a contrasting background for easier identification of white particulates.

Specifications

Weight (g/33mm)	Thickness (mm)	Air Permeability (g/300mL)	Nominal Retention (µm)
0.2 ± 0.05	1.20 ± 0.60	2.00 ± 1.50	50

Ordering Information

Color	Diameter	Qty/Pk	Catalog No.
White	33 mm	50	NO.1026
Black	33 mm	50	NO.1026-B
